1. Team Evaluation — 50%

Criterion	Weight	What is evaluated
Requirements & UX	8%	Quality of requirements, traceability to real users/processes, use cases, main flows, wireframes, evidence from interviews and usability testing
Architecture & Design	10%	Quality and coherence of enterprise architecture, separation of concerns, technology choices, data model, API design, architectural decisions
Implementation & Functionality	15%	Completeness and correctness of the application, quality of the main workflows, integration between frontend/backend/database, business rules
Testing & Quality	7%	Unit tests, appropriate test coverage, validation of important workflows, code quality and handling of errors
Deployment & Operability	5%	Reproducible deployment, configuration, documentation, ability to run and demonstrate the application
Documentation & Technical Communication	5%	Accuracy and completeness of documentation, consistency between documentation and implementation, quality of diagrams and explanations
Total	**50%**	

2. Individual Student Evaluation — 50%

The individual component should focus strongly on **what the student actually understands and owns**, rather than simply counting lines of code or Git commits.

Criterion	Weight	What is evaluated
Owned End-to-End Workflow	20%	Student can explain and demonstrate one complete workflow across requirements, UX, architecture, data, APIs, implementation and testing
Owned Non-Workflow Artifact	10%	Quality and understanding of the additional artifact owned by the student: architecture, ERD, UX research, API specification, testing, deployment, etc.
Independent Feature / No-GenAI Implementation	10%	Quality of the feature implemented without GenAI and student's ability to explain the design and implementation decisions
Technical Understanding & Defense	5%	Ability to answer questions, explain design decisions, identify limitations and reason about alternatives
Contribution & Professionalism	5%	Meaningful contribution to the team, collaboration, version-control evidence, documentation, reliability and responsibility
Total	**50%**	

Part of this evaluation was produced with the use of ChatGPT (GPT-5.6 Luna) and reviewed by academic staff responsible for this course
